

POJA SHRI J M

Artificial Intelligence & Data Science Student

+91 8682845032 | pojashrijm2006@gmail.com | LinkedIn | GitHub | LeetCode | Portfolio

Education

B.Tech in Artificial Intelligence and Data Science

2023 – Present

Jerusalem College of Engineering, Chennai

CGPA: 9.2 (Pursuing)

Technical Skills

- **Languages:** Python, Java, C++, JavaScript
- **Machine Learning:** Model building, Feature Engineering, Model Evaluation
- **Deep Learning:** CNN, LSTM, TensorFlow, PyTorch
- **Natural Language Processing:** Tokenization, Text Classification, Embeddings
- **Web & Deployment:** Flask, Streamlit
- **Tools & Platforms:** Git, Docker, MLflow, Jupyter Notebook, Google Colab, IBM Watson, Azure

Experience

AI & Data Science Intern — Zeptoware Systems Private Limited

Dec 2025 – Jan 2026

- Designed and developed a Fake Job Detection System using Natural Language Processing techniques.
- Implemented text preprocessing, feature extraction, and machine learning models for job post classification.
- Analyzed model performance and reduced false job classification errors through iterative improvements.

Frontend Developer Intern — Parkqwik Pvt Ltd

Jun 2025 – Jul 2025

- Developed responsive user interfaces using HTML, CSS, and JavaScript.
- Built the Million Dollar InstaPage interactive web application with dynamic pixel selection.
- Integrated frontend components with backend APIs to enable real-time user interaction.

Open Source Contributor — GSSoC'26 & NSOC'26

May 2026 – Present

- Contributing to open-source projects through feature development, UI enhancements, bug fixing, and collaborative development workflows.
- Actively participating in community-driven software development using Git, GitHub, frontend technologies, and modern development practices.

Projects

DocMind AI – Intelligent Document Assistant

GitHub | Live Demo

- Built a full-stack document intelligence platform (Next.js, React, TypeScript) integrating OpenAI/Gemini APIs and a vector database for semantic search over uploaded PDFs.
- Implemented core features including PDF chat, AI summarization, automated flashcard/quiz generation, and semantic search with a responsive, theme-aware UI.
- Designed and deployed the application end-to-end on Vercel, handling API integration, state management, and client-server data flow.

Fake Job Detection System — NLP — Machine Learning — Deep Learning

Github | Live Demo

- Developed an end-to-end fake job posting detection system using Natural Language Processing (NLP) techniques and supervised learning models.
- Performed text preprocessing, tokenization, padding, feature extraction, and word embedding generation to transform unstructured job descriptions into machine-readable representations.
- Trained and evaluated Logistic Regression, Random Forest, CNN, and LSTM models, comparing their performance using accuracy, precision, recall, and F1-score metrics.

AI-Based Assistive Navigation System for the Visually Impaired

- Designing a sensor-driven assistive system combining computer vision and real-time object detection for visually impaired navigation.
- Architecting a modular pipeline for voice assistance, obstacle detection, and environmental awareness under low-latency constraints.
- Evaluating lightweight, energy-efficient model variants for on-device deployment.

Certifications

Machine Learning — NPTEL(Elite) | PyTorch Bootcamp — OpenCV University (Grade: 100%) | Convolutional Neural Networks with TensorFlow — Coursera | Natural Language Processing — NPTEL | IBM AI Fundamentals | Python Programming — DigiLabs
